*Method Feasibility has been confirmed and the Method Development is in progress, the target for completion of these methods is 2018. If you have a need for any of these actives sooner or any actives not listed, please email MarketingTechServices@dynalabs.us for Feasibility Quote or a Method Development Quote.

**Stability Indicating Methods are validated at the API level according to USP 1225 Category 1, complete with degradation studies. Validation Extension is still required for each formulation to meet the specificity requirement. For methodology that is not stability indicating due to limitations to separate degradants (e.g. IC and Titration) please contact MarketingTechServices@dynalabs.us for information about Stability Profile testing.

*****Target Stability** is not confirmed. Please email MarketingTechServices@dynalabs.us for more information and for suggested storage conditions.

****For all titrations the amount of sample required is concentration based and the amount of material listed is based on the amount of active required in some cases. Please email MarketingTechServices@dynalabs.us
