<sup>1</sup> Stability Indicating Methods are validated at the API level according to USP 1225 Category 1, complete with degradation studies. Validation Extension is still required for each formulation to meet the specificity requirement. For methodology that is not stability indicating due to limitations to separate degradants (e.g. IC and Titration) please contact [MarketingTechServices@dynalabs.us](mailto:MarketingTechServices@dynalabs.us) for information about Stability Profile testing.

<sup>2</sup> Method Feasibility has been confirmed and the Method Development is in progress, the target for completion of these methods is 2018. If you have a need for any of these actives sooner or any actives not listed, please email [MarketingTechServices@dynalabs.us](mailto:MarketingTechServices@dynalabs.us) for Feasibility Quote or a Method Development Quote.

<sup>3</sup> Due to complexity of the active listed a quote will be required to outline additional testing that may be required to ensure accurate analysis. Please contact [MarketingTechServices@dynalabs.us](mailto:MarketingTechServices@dynalabs.us) for information.
