<sup>1</sup> Stability Indicating Methods are validated at the API level according to USP 1225 Category 1, complete with degradation studies. **Specificity** (Validation Extension) is still required for each formulation to meet the specificity requirement. For methodology that is inherently not stability indicating because of inability separate degradants (e.g. IC and Titration) please contact [MarketingTechServices@dynamalabs.us](mailto:MarketingTechServices@dynamalabs.us) for information about **Stability Profile Testing**.

<sup>2</sup> Due to complexity of the active, a quote will be required to ensure accurate analysis. Please contact [MarketingTechServices@dynamalabs.us](mailto:MarketingTechServices@dynamalabs.us) for information.

<sup>3</sup> **Method Validation** is a quoted service that can be absorbed or socialized based on market demand. Unique and specific validation needs will be assessed to provide the most efficient service and best pricing. Please contact [MarketingTechServices@dynamalabs.us](mailto:MarketingTechServices@dynamalabs.us) for information.
